PROFESSIONAL SUMMARY

Artificial Intelligence & Business Analytics (AI-BA) and Finance double major at the University of South Florida, graduating August 2026. Experienced in developing practical, real-world AI-driven analytical applications, data integrations, and machine learning models using Python, SQL, and JavaScript through academic projects. Dean's List honoree seeking an entry-level or intern opportunity in AI software engineering.

EDUCATION

BACHELOR OF SCIENCE: AI-BA & FINANCE

University of South Florida, Tampa, Florida

Expected: Aug 2026

GPA: 3.87

HONORS & LEADERSHIP

- Recognized for **leadership** and collaboration in AI group projects, consistently achieved top-tier performance
- **AI Spokesperson** for Dubai American Academy (DAA) AI and Robotics community; programmed and demonstrated Baxter robot by Rethink Robotics
- Earned **Dean's List** honors for four semesters

SKILLS

Programming & Tools: Python, SQL, R, Javascript, HTML, CSS, Jupyter Notebook, Git, RStudio, NumPy, Docker

ML, Technologies, & Concepts: Pandas, scikit-learn, k-Means, Decision Trees, Data Pipelines, Neural Networks, Rest APIs, Extract/Transform/Load (ETL), Distributed Systems, Model Evaluation

Data Visualization & Analytics: Tableau, Microsoft Excel, Power BI, Qlik

RELEVANT COURSEWORK

Big Data for AI & Analytics		Applied Data Science		Data Mining & Predictive Analytics
Python for Business Analytics		AI & Analytics		Business Application Development
Statistical Programming		Data Visualization		Data Modeling for Business Analytics

TECHNICAL PROJECTS

1. AI Image Authenticity Detector - Prototype (HTML, CSS, JavaScript)

- Built a full-stack web prototype to detect AI-generated or manipulated images using front-end and backend logic, focusing on usability and real-time analysis of image inputs.
- Implemented image analysis logic to detect AI-generated content and deliver real-time results.

2. Loan Default Risk Model - Machine Learning Model (Python, Pandas, scikit-learn)

- Developed classification models (Logistic Regression, Trees, Ensembles) to predict loan default risk.
- Conducted EDA and feature engineering, using cross-validation to assess performance.
- Optimized thresholds using cost trade-offs, delivering a model projected to reduce losses by ~\$450K.

3. Distributed Data Pipeline - ETL & Data Engineering (SQL, PostgreSQL, Cassandra, Citus, Docker, Python)

- Built a scalable data pipeline integrating multiple databases into a centralized data warehouse.
- Engineered an automated ETL pipeline using Docker for distributed PostgreSQL and sharded data processing.
- Resolved shard-level inconsistencies and extended architecture with Cassandra for high performance access.
- Evaluated Citus (distributed PostgreSQL) for scalability, performance, and real-time analytics.

4. Optimization of Retail Performance (Tableau, Python)

- Analyzed 291K+ retail transactions to identify sales trends, customer segments, and profitability drivers.
- Built interactive Tableau dashboards with forecasting, drill-downs, and what-if analysis to support decisions.
- Translated insights into recommendations for inventory optimization, regional focus, & revenue growth.

EXPERIENCE

INFOTECH CONSULT, LLC, Tampa, FL, Finance **Intern** (Part-Time; Volunteer)

Mar 2023-Mar 2026

- Helped track business expenses and keep financial records organized in Excel.
- Assisted with annual report filing and kept track of deadlines to make sure the company stayed compliant.

UNIVERSAL ACADEMY OF FLORIDA, Tampa, FL, Admin **Intern** (Part-Time) **Oct 21-May 22; Sept 24-Jun 25**

- Supported administrative and accounting operations, including scheduling, data entry, and reconciliation.
- Served as a part-time substitute teacher as needed. Delivered personalized SAT Math/English instructions.
