## PROFESSIONAL SUMMARY

Artificial Intelligence & Business Analytics (AI-BA) and Finance double major at the University of South Florida, graduating August 2026. Experienced in developing practical, real-world AI-driven analytical applications, data integrations, and machine learning models using Python, SQL, and JavaScript through academic projects. Dean's List honoree seeking an entry-level or intern opportunity in AI software engineering.

## EDUCATION

**BACHELOR OF SCIENCE: AI-BA & FINANCE**

University of South Florida, Tampa, Florida

**Expected: Aug 2026**

**GPA: 3.87**

## HONORS & LEADERSHIP

- Recognized for **leadership** and collaboration in AI group projects, consistently achieved top-tier performance
- **AI Spokesperson** for Dubai American Academy (DAA) AI and Robotics community; programmed and demonstrated Baxter robot by Rethink Robotics
- Earned **Dean's List** honors for four semesters

## SKILLS

**Programming & Tools:** Python, SQL, R, Javascript, HTML, CSS, Jupyter Notebook, Git, RStudio, NumPy, Docker

**ML, Technologies, & Concepts:** Pandas, scikit-learn, k-Means, Decision Trees, Data Pipelines, Neural Networks, Rest APIs, Extract/Transform/Load (ETL), Distributed Systems, Model Evaluation

**Data Visualization & Analytics:** Tableau, Microsoft Excel, Power BI, Qlik

## TECHNICAL PROJECTS

### 1. AI Image Authenticity Detector - Prototype (HTML, CSS, JavaScript)

- Built a full-stack web prototype to detect AI-generated or manipulated images using front-end and backend logic, focusing on usability and real-time analysis of image inputs.
- Implemented image analysis logic to detect AI-generated content and deliver real-time results.

### 2. Loan Default Risk Model - Machine Learning Model (Python, Pandas, scikit-learn)

- Developed classification models (Logistic Regression, Trees, Ensembles) to predict loan default risk.
- Conducted EDA and feature engineering, using cross-validation to assess performance.
- Optimized thresholds using cost trade-offs, delivering a model projected to reduce losses by ~\$450K.

### 3. Distributed Data Pipeline - ETL & Data Engineering (SQL, PostgreSQL, Cassandra, Citus, Docker, Python)

- Built a scalable data pipeline integrating multiple databases into a centralized data warehouse.
- Engineered an automated ETL pipeline using Docker for distributed PostgreSQL and sharded data processing.
- Resolved shard-level inconsistencies and extended architecture with Cassandra for high performance access.
- Evaluated Citus (distributed PostgreSQL) for scalability, performance, and real-time analytics.

### 4. Student Debt & Career Outcomes Research (Tableau)

- Analyzed large-scale datasets from FRED, BLS, IPEDS, and the U.S. Department of Education to evaluate growth in U.S. student loan debt and its relationship with earnings, unemployment, education level, and institution type.
- Built advanced visualizations in Tableau to compare ROI and wage-to-debt ratios across different fields.

## EXPERIENCE

**INFOTECH CONSULT, LLC**, Tampa, FL, Finance **Intern** (Part-Time; Volunteer)

**Mar 2023-Mar 2026**

- Helped track business expenses and keep financial records organized in Excel.
- Assisted with annual report filing and kept track of deadlines to make sure the company stayed compliant.

**UNIVERSAL ACADEMY OF FLORIDA**, Tampa, FL, Admin **Intern** (Part-Time) **Oct 21-May 22; Sept 24-Jun 25**

- Supported administrative and accounting operations, including scheduling, data entry, and reconciliation.
- Served as a part-time substitute teacher as needed. Delivered personalized SAT Math/English instructions.
